Abstract of JP 4341454 (A)

PURPOSE:To load a sheet material correctly even when it is switched over to a roughly horizontal condition in a sheet storing device capable of switching over the storing position of a discharged sheet material between roughly vertical and roughly horizontal conditions. **CONSTITUTION:**In connection with the movement of a 1st guide member 14 for leading downward the tip of a sheet to be discharged, the discharging angle of a sheet material is varied by means of discharging rollers 26 and 30. When the 1st guide member 14 is switched over to roughly horizontal condition, a link 32 rises and the position of the roller 30 also rises to direct the discharging angle of the sheet material to the forward position as indicated by the arrow 2.
